

## Supplement

The following supplementary materials are available for this article: Huang, W.-J., Hsu, T.-C., Chung, S.-W. 2024 *Artemisia tyuosenicola* (Asteraceae), a new species from Taiwan. *Taiwania* 69(3): 372-379. doi: 10.6165/tai.2024.69.372

**Table S1.** Taxa sampled, voucher information, and GenBank accession numbers for sequences analyzed in this study. Missing data is represented by “--”.

## Subgenus

- Artemisia
- Dracunculus
- Absinthium
- Seriphidium
- Pacifica
- Tridentatae

**Fig. S1.** The cladogram of *Artemisia* nrDNA dataset (ITS, ETS) using the Bayesian Inference method. The values adjacent to nodes represent Bayesian posterior probabilities (PP) / bootstrap percentages of Maximum Likelihood analysis (BS). Nodes with PP < 0.50 were collapsed, while BS < 50% is represented by a dash (-). *Artemisia tyuosenicola* samples are highlighted in red, and other newly generated sequences in this study are depicted in blue. Sample collection number follows the taxa names. Subgenus annotations are based on Jiao et al. (2019).

**Fig S2.** The cladogram of *Artemisia* cpDNA dataset (trnL-trnF, psbA-trnH) using the Bayesian Inference method. The values adjacent to nodes represent Bayesian posterior probabilities (PP) / bootstrap percentages of Maximum Likelihood analysis (BS). Nodes with PP < 0.50 were collapsed, while BS < 50% is represented by a dash (-). *Artemisia tyuosenicola* samples are highlighted in red, and other newly generated sequences in this study are depicted in blue.
